At University

The section provides the presentation of my professional activity at [Udine University SSIS](#) and SSIS modules.

The modules I am in charge of are:

- **MODULE I Programmazione e Progettazione di un Percorso Didattico**
- **MODULE II Strategie di apprendimento della lingua straniera**

They are both addressed to teachers expected to implement language competences and knowledge in an operative way. The activities that are gradually being constructed are cooperative and the laboratories are meant to train young teachers organize suitable learning-teaching paths to meet learners' interests with an eye to individual learning styles and strategy implementation.

The section provides the Power Point Presentations of the two modules to provide course participants with a clear idea of their learning process steps. They also give them the opportunity to reach information about the activities to be implemented during the learning and training process.

SSIS Modules Presentation
